Manufacturing Outlook

Walking the talk to modernization

In 2015, most manufacturers experienced modest levels of profitability helped by lower commodity prices and low wage inflation. This environment provided a brief window of opportunity to consider the role new “disruptive” technologies might have on manufacturing businesses and to discuss potential investment strategies. In addition to contributing to the hype surrounding the **Internet of Things (IoT)**, experts called for continued digitalization and smarter manufacturing, shifting to customer-centric operations, adoption of mobile and social platforms, and, of course, cloud deployment.

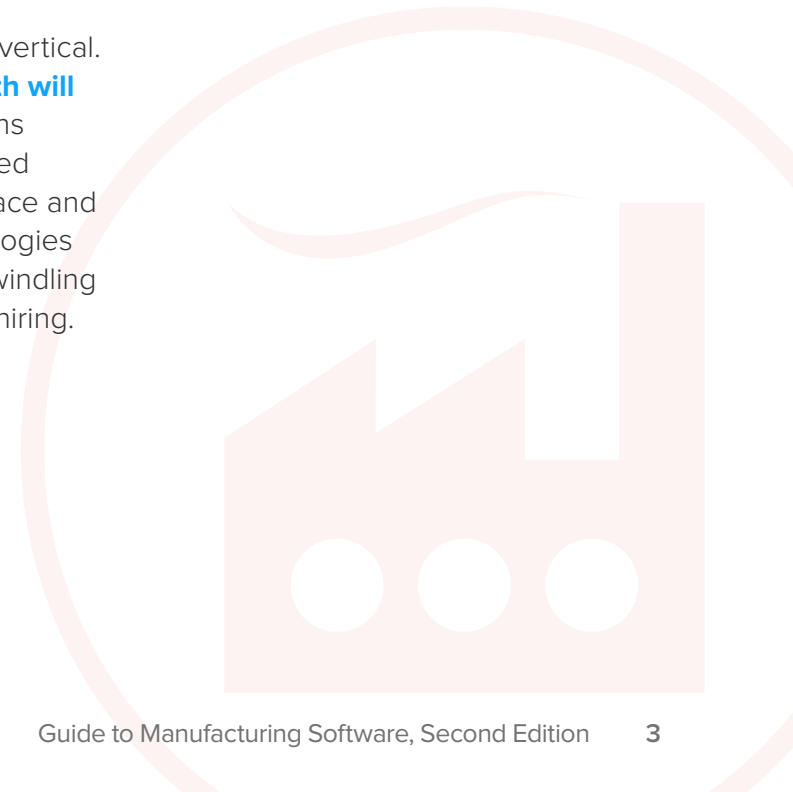

But despite this optimism about the “**Factory of the Future**,” 2015 ended with a cautiousness that continues. A January 2016 report from PwC reveals a reduction in forecasted growth for US industrial manufacturers.¹ World economic optimism is down overall.

To overcome this downturn, manufacturers will need to prioritize their investments and make incremental steps toward their personalized vision of the future.

As always, trends are varying by vertical. In the automotive industry, **growth will come** via mergers and acquisitions and innovation due to an increased investment in R & D.² For aerospace and defense companies, new technologies will be essential for navigating dwindling municipal budgets and stagnant hiring.

Across the board, though, **being more responsive to customers** will be paramount for manufacturers. In a recent report, IDC predicts that manufacturers that invest in “customer-centricity” will gain market share growth by 2% to 3%.³

Will your company come out on top? Read on to see how the right software can help you continue to grow your market share.

Top concerns for manufacturers

Finding and managing growth

Companies of all sizes are exploring niche and emerging markets, while “re-shoring” to domestic factories continues, albeit in a more limited fashion than previously predicted.⁴

Recruiting and retaining top talent

Finding and retaining talent continues to be challenging in manufacturing, which remains a relatively undesirable industry for Millennials. According to a PwC report, new hiring will remain flat, despite a brighter outlook a year ago.⁵

Accelerating speed to market and customization

Customers continue to expect more, which is forcing manufacturers to achieve faster turnaround times, rely on 24/7 facilities, and adapt plans more quickly based on information derived from customer-focused analytics. [Configure Price Quote](#) solutions can help here.

Improving quality and program controls

Customers demand precision from order to delivery and expect vendors to proactively solve regulatory compliance challenges.

Creating a competitive advantage

To fight brand commoditization and shrinking profit margins due to the need for ultra-competitive pricing, manufacturers need to accelerate product releases and jumpstart innovation, while balancing speed with affordability.

To help manufacturers choose the right software in a rapidly changing industry landscape, this guide will explore five key solution areas that are essential to any successful manufacturing operation:

ERP

Enterprise Resource
Planning

SCM

Supply Chain
Management

PLM

Product Lifecycle
Management

CX

Customer
Experience

EAM

Enterprise Asset
Management

We'll discuss the market trends increasing the need for adoption of each technology, provide a “shopper’s checklist” of essential features and functions, and share success stories from real-life industry leaders. This guide will also outline how Infor’s industry-specific software and cloud-based platform are helping global companies thrive.

Enterprise Resource Planning (ERP)

Manufacturers have relied on ERP systems as their technology backbone for at least 25 years now. That's a lot of history, a lot of ingrained commitment to on-premise ERP, and a lot of "we've always done it this way" habits. Times change, of course, and the classic ERP focus and deployment models simply don't make sense in the post-recession market, where being competitive in virtually every area is essential for survival.

One strategy that's been proven to build a more agile business is moving to the cloud. A cloud-based ERP system can not only shift a company's payment structure from a capital expense to an operating expense (which frees up precious funds), it allows a business to rapidly expand as needed and integrate with whatever system will be needed for future success.

IDC's principal research manager S. Ramachandran recently **said it best:**

Manufacturing companies need to keep looking for opportunities to migrate to a cloud-based ERP in stages, if not in entirety, to fully leverage the advantages offered by the next generation of applications and their deployment methods available in the market today.

The advantages range from better cost models to improved functionalities leveraging best practices, global performance standards and competitive SLAs that cannot be ignored.

In the cloud, your ERP system is more flexible than ever before, which comes in handy when considering manufacturing's inevitable volatility. And, you're spared a lot of IT staffing headaches because your cloud partner handles upgrades, hardware, databases, integrations, migrations, security, disaster recovery, and hosting for you. No wonder everyone's talking about it.

Read on to learn more and have a conversation of your own.

ERP shopper's checklist

Upgrading an aging ERP system or deploying a new solution is not a decision to be made lightly. While all ERP systems span operations, finance, customer relations, and human resources, you should choose software that aligns to your business drivers—and that can help you differentiate your business from the pack.

Is your company on the path to becoming a “digital enterprise”?

Receive an assessment plus valuable resources to help guide you ›

If you're in the market for a new ERP system, look for a solution that offers:

- ✓ **Ease of use**—Your ERP system has to match the way you do business and put information from all the systems that run your business at the fingertips of your users. This information must be presented in a way that makes sense to users and doesn't force them to toggle between disparate screens, repeatedly log in and out of multiple systems, and waste time digging through data.
- ✓ **Integration**—Fashion companies often have designers and merchandizers in New York, product developers in Alabama, and production staff in China. To keep data flowing smoothly and ensure adherence to tight schedules, your ERP system must seamlessly integrate with any specialized applications you rely on, and be able to do so across business units and geographic locations.
- ✓ **Industry-ready functionality**—A pharmaceutical manufacturer has little in common with a fashion manufacturer. And their sales, production, supply, and accounting requirements couldn't be more different. Your ERP provider should have vertical-specific software bundles that eliminate the need for costly, time-consuming customizations. Your business moves too fast to wait for custom development.
- ✓ **Flexibility**—The right cloud computing solution is available 24x7x365, no matter where your employees are located or what devices they're using. Because of their scale and expertise, cloud computing providers such as [Amazon® Web Services](#) can achieve system up-time levels and security and disaster recovery measures that cannot be matched.

ERP customer stories

Infor ERP solutions are designed to address the specific challenges of your industry. Here is a sample of our many success stories, spanning industries from Automotive to High Tech.

Large metal fabricator MetCam cuts inventory in half and gets deeper shop-floor visibility with Infor Syteline. **03:04**

Ellwood Group enables growth and acquisition with Infor CloudSuite Industrial's out-of-the-box functionality

Learn why the large steel manufacturer chose Infor's cloud-based solution over SAP's ERP to unify its previously disjointed operations.

Get to know Infor ERP

Infor CloudSuite Industrial— proven power with total flexibility

Infor CloudSuite™ Industrial helps manufacturers and distributors of all types improve productivity and respond faster to change. From selling and sourcing to production and fulfillment, this robust enterprise resource planning solution provides organization-wide visibility.

Even organizations with highly complex supply chains are able to cut costs and ensure on-time production and delivery by using Infor CloudSuite Industrial to automate and manage key business processes, implement highly efficient process flows, and better match supply with demand.

Watch demo: Infor CloudSuite Industrial expedites ordering and production
06:32

Extensible framework

Whether you're an engineer-to-order or mixed-mode manufacturer, Infor CloudSuite Industrial adapts to your needs, rather than forcing you to follow a rigid set of procedures. Without the cost and delays involved in modifying or writing new code for unique business requirements, you get a powerful, easy-to-use solution that works the way you do.

Flexibility to grow

As your business grows and your needs change, the solution's unmatched scalability is there to provide support. Add a new company to your organizational structure with no downtime. Easily separate data if you sell off a subsidiary. Plus, cloud deployment allows you to expand the solution to any location you want—without IT involvement.

Built-in experience

Infor CloudSuite Industrial is packed with nearly 30 years of industry expertise. Advanced manufacturing and supply chain planning capabilities—including role-based dashboards and KPIs, in-context data visualization, and more are built into the core solution, so you can concentrate on your business, not your systems.

[Visit the Infor CloudSuite Industrial page to learn more >](#)

Supply Chain Management (SCM)

Assessing risk is a common part of supply chain management today. But current risk analysis usually doesn't take advantage of the rich contextual information that's available. At the outset, a company might consult with a risk management firm to determine places from which they should avoid sourcing. But once those plans are set, there isn't much maneuverability regarding execution if new risk factors pop up. Information about supply chain risk might come in daily, but that information is often abstract, without any clear, actionable value.

"Live" contextual data can change that. Supply chain platforms make use of real-time news feeds, weather feeds, and other IoT data to find out if a disruption is happening. But more than that, they can provide personalized context for individual supply chains. So instead of a company finding out that there's a typhoon in the Pacific and ships might be affected, it can be alerted about which orders will be affected. And the sooner a company knows this, the faster it can mitigate any pending disasters.

This is why the integration of "live" data into a supply chain transaction platform is so important. It's not enough to know that something is happening—it's important to know how you will be affected by it. It's one thing for an alert system to tell you that there's a strike in a country where you have suppliers, but it's more useful to be alerted about which orders could be affected.

Couldn't your business benefit from having this type of visibility?

SCM shopper's checklist

When considering a new SCM solution, think beyond just managing your supply chain to optimizing it with big data and advanced analytics. [An article in Refrigerated Transporter](#) says, “Predictive analytics and business intelligence are becoming a decisive essential in developing supply chain strategies to improve effectiveness and efficiency of processes, and support innovation to enhanced logistics planning.”

Is your company ready for today's manufacturing industry challenges?

Take our readiness test to find out >

To optimize the balance of supply and demand, your company should deploy a supply chain management solution that provides:

- ✓ **Capabilities for strategic network design/tactical planning**—Look for a solution that lets you build a time-phased plan of material movement through your enterprise, trading off capacities and evaluating different transportation and inventory options.
- ✓ **Multi-site and multi-product capabilities**—Optimize planning across multiple sites, balance product mix capability with profitability, and consider shelf-life constraints in build-ahead strategies.
- ✓ **A collaborative view of demand planning**—Make sure you can get an accurate picture of demand to drive production, inventory, distribution, and buying plans across your operations. Social collaboration tools can help accelerate decision-making.
- ✓ **Warehouse management tools for mastering fulfillment**—Make sure the solution you choose offers tools for organizing and managing inbound and outbound deliveries, putaway, and picking, as well as optimizing your labor resources.
- ✓ **Advanced production scheduling and optimal sequencing**—Pick a solution that lets you synchronize products across all lines, checking interdependencies and optimally sequencing to shorten make-time and increase productivity.
- ✓ **Performance management for analyzing key metrics**—Look for a solution that allows you to create your own key performance indicators and monitor the effectiveness of all operations, bringing sharper focus to critical decisions.

SCM customer stories

Infor SCM solutions are designed to address the specific challenges of your industry. Here is a sample of our many success stories, spanning industries from distribution & logistics to industrial manufacturing.

Product Lifecycle Management (PLM)

Innovation has always played an important role in the success of manufacturers. But in recent years, the role of innovation at manufacturing companies has changed in fundamental ways.

First, innovation is now a top business imperative. Second, the approaches to innovation that worked in the past won't suffice in the present, where the manufacturing industry is more competitive and fast-paced than ever. A rise in customer demand is coinciding with the emergence of breakthrough innovations in materials and processes like nanomaterials, 3D printing, and advanced robotics.

Manufacturing companies need to protect their innovations from theft and still actively work with new partners in new markets. The deployment of a next-generation product lifecycle management (PLM) software platform can federate data from multiple systems across an extended global supply chain, creating a central repository for all data associated with a particular project or program regardless of the location or origin.

PLM shopper's checklist

Some manufacturers are already leading the way to modern manufacturing, setting new production standards for product lifecycle management (PLM). They are making bold advances and reaping greater rewards. A holistic approach is required to propel manufacturers into the modern realm of advanced PLM practices. Multiple IT capabilities need to be harnessed in order to fully benefit from next generation product innovation technologies, including collaboration on product design, price-quote-configure tools, assemble-to-order capabilities, automated functionality for quality control and compliance, and 3D printing for rapid prototyping.

Is your company on the path to becoming a “digital enterprise”?

Receive an assessment plus valuable resources to help guide you. >

If you're in the market for a new PLM system, look for a solution that can:

- ✓ **Optimize input materials**—Process manufacturers, for example, can use a raw materials rationalization engine to intelligently select input materials to generate significant, measurable savings that directly impact inventory.
- ✓ **Integrate with engineering systems**—You need to integrate with more than just your ERP system with your PLM software. By connecting your CAD or other systems, all your teams—R&D, engineering, and manufacturing—can work toward common goals.
- ✓ **Provide “staged” capabilities**—With a stage-gating approach to product development, product rollout schedules can be met or exceeded, despite the various departments—and locations—contributing to a new product line. The PLM software you choose should automate this process for maximum efficiency.
- ✓ **Simplify integration**—A PLM solution with pre-built integrations to your ERP solution will be your best bet for realizing a rapid return on investment. It will also let your technical resources focus on value-added activities. And a cloud PLM solution will let you put maintenance on the backburner.
- ✓ **Move you closer to 100% compliance**—No matter the industry, complying with regulatory requirements is not optional. Fail to meet compliance requirements and you incur enormous risk. Accordingly, your PLM system should provide the capabilities you need to design, produce, and update products that consistently meet government regulations.
- ✓ **Provide intelligent workflows**—Decision-based workflow capabilities can help you improve overall efficiency and prevent potentially costly errors. Managers enjoy greater visibility—in real time.

PLM customer stories

Infor PLM solutions are designed to address the specific challenges of your industry. Here is a sample of our many success stories, spanning industries from process manufacturing to food & beverage and aerospace & defense.

AkzoNobel reduces costs and gains efficiency with Infor Optiva.

Customer Experience (CX)

Customer Experience (CX)—Customer Relationship Management (CRM), Configure Price Quote (CPQ), and Contract Lifecycle Management (CLM)

Do your customers get the same great experience with your brand whether they interact with you through phone, web, email, Twitter®, or another channel?

Maximizing satisfaction throughout the customer journey may increase customer satisfaction by 20% and revenue by up to 15%, while lowering customer service costs by as much as 20%. And by 2020, customer experience is expected overtake price and product as the key brand differentiator.⁶

Companies must think beyond traditional campaigns with start and stop dates, and instead map the entire customer journey—that fluid and often-complex web of customer interactions. Strategically anticipating touchpoints along the customer journey and ensuring a consistent experience is key to supporting long-term customer relationships.

By developing an omni-channel marketing strategy and employing technology that helps you efficiently stay on top of it all, you can deliver great, consistent experiences to your customers—any time, any place, and through any service channel. A robust software suite that encompasses the full Customer Experience (CX)—and includes solutions such as Customer Relationship Management (CRM), Configure Price Quote (CPQ), and Contract Lifecycle Management (CLM)—can equip your company for success. Read on to learn more.

CX shopper's checklist

Building a positive customer experience is becoming a critical path to differentiation for manufacturers. A customer experience suite should help you integrate customer data across the enterprise, accelerate customer engagement, and drive profitability. Key applications within customer experience include: customer relationship management (CRM), configure price quote (CPQ), and contract lifecycle management (CLM).

Is your company ready for today's manufacturing industry challenges?

Take our readiness test to find out >

CRM—Look for a CRM solution that delivers a complete view of customer interactions across your sales, marketing, customer service, and support teams. In addition, look for a CRM solution that provides:

- ✓ **Superior mobile and tablet support**—Your workforce is mobile, and your CRM solution should be, too. Look for one that delivers purpose-built applications for the mobile workforce, to give you a strong competitive advantage.
- ✓ **Intelligent interactions**—To drive revenue and deliver an exceptional customer experience, you need a solution that can build rich customer profiles and provide best practice automation across sales, marketing and service.
- ✓ **Ultimate flexibility**—Choose a CRM solution that can be deployed in the cloud, on-premise, or in a hybrid application, with mobile options to accommodate your business needs. You'll want to buy, finance, or subscribe while maintaining full control of your data.

CPQ—A CPQ solution focuses on accelerating product configuration, pricing, and quoting. Look for one that delivers:

- ✓ **An intuitive, customizable user experience**—You'll want to provide your sales team and dealers with a dynamically rendered user experience that presents the right product view and pricing, based on role, language, location, and viewing device.
- ✓ **A powerful configuration engine**—With a powerful configuration engine, you can instantly process rules and constraints in product models to enable guided selection of only compatible features, options, and dimensions.
- ✓ **An image-based design studio**—With a graphical user interface, you can create a visual presentation of a complex product model, with point-and-click access to details of every rule and constraint.

CLM—A CLM solution should help streamline the creation, negotiation, execution, and management of contracts throughout their development. Your company should deploy a CLM solution that provides:

- ✓ **Dynamic creation of new contracts**—Through rules-based definition, provide users with policy guidance and compliance recommendations through every stage of the contracting process.
- ✓ **Easy review cycles**—Designate terms, conditions, and clauses as attributes to make it easy for reviewers to quickly see the key characteristics for each contract.
- ✓ **A consumer-grade user experience**—Boost efficiency and user adoption by providing an intuitive interface that is optimized for all devices and easy to learn with templates to generate differentiated documents with ease.

CX customer stories

Infor's Customer Experience (CX) solutions are designed to address the specific challenges of your industry. Here is a sample of our many success stories, spanning industries from process manufacturing to equipment manufacturing.

complete list of solutions. >

Enterprise Asset Management (EAM)

In manufacturing, what is more crucial than the equipment itself? Downtime, which is detrimental to any business, is especially damaging and costly for manufacturers.

According to Mining Global, each hydraulic power and belt drive failure can result in up to \$180,000 in lost production.

Yet many organizations lack the insight and visibility they need to proactively refine their operations in a cost-effective way. Asset managers need to keep their equipment performing, despite constrained budgets and aging infrastructure. Advanced enterprise asset management (EAM) solutions give companies deep visibility into their assets and allow them to plan and prioritize maintenance activities more effectively. This, in turn, curbs the tendency to overspend or underspend on maintenance practices.

By recognizing priorities, increasing asset visibility, analyzing patterns, and responding with greater agility, companies equipped with EAM solutions can reduce costs even as they reduce risk. They can also perform at higher levels of reliability, quality, and safety without needing more resources.

More manufacturers are adopting enterprise asset management (EAM) software to help them make the most of their limited resources, while managing risk. According to a [report by research and consulting firm MarketsandMarkets](#), the EAM market will exceed \$4 billion by 2019.

The following section can help your company get up-to-speed on the benefits of EAM software and help you find the right solution for your business.

EAM shopper's checklist

EAM software is essential for managing asset performance and maximizing resources, but this crucial component of a company's IT infrastructure requires long-term considerations. "Selection is becoming increasingly based on the relationship with the vendor rather than simply the software tool it sells," says expert David Berger, director of Western Management Consultants. "This is because partnering with the right vendor can facilitate the implementation of more long-lasting improvements."⁷

Is your company on the path to becoming a digital enterprise?

Receive an assessment plus valuable resources to help guide you ›

To maximize the life and performance of your equipment and machinery, your company should deploy an EAM solution that provides:

- ✓ **Advanced scheduling capabilities**—Look for sophisticated tools that help you distinguish between long-term planning of a maintenance program and short-term scheduling (multiple priorities, what-if analysis). With a system-wide view, your company can meet changing demands without impacting production schedules.
- ✓ **Analytical tools**—The system you choose should offer not just simple analytics, like Pareto analysis, on high frequency or high-cost problem and cause codes, but more sophisticated tools for performing root cause and trend analysis as well. Look for role-based dashboards that enable you to easily make better business decisions.
- ✓ **Health, safety, and environmental safeguards**—Look for a solution that can help ensure a safe environment, with features such as lockout/tagout, safety checklists, safety priority field, and material safety data sheets.
- ✓ **Notification and workflow features**—When you can automate processes, like alerting a supervisor that maintenance is required or that a key warranty is expiring soon, you can increase asset productivity.
- ✓ **Maintenance optimization**—Look for a system that includes capabilities for determining the right mix of failure-based maintenance (run to fail), use-based maintenance, preventive maintenance, and condition-based maintenance.
- ✓ **Mobility**—Deploy a system that lets you view up-to-date information when and where you need it the most. Your field service team, for example, can be more responsive and efficient when all systems are accessible via mobile device.

About Infor

Infor builds beautiful business applications with last mile functionality and scientific insights for select industries delivered as a cloud service. With 14,000 employees and customers in more than 200 countries and territories, Infor automates critical processes for industries including healthcare, manufacturing, fashion, wholesale distribution, hospitality, retail, and public sector. Infor software helps eliminate the need for costly customization through embedded deep industry domain expertise. Headquartered in New York City, Infor is also home to one of the largest creative agencies in Manhattan, Hook & Loop, focused on delivering a user experience that is fun and engaging. Infor deploys its cloud applications primarily on the Amazon Web Services cloud and open source platforms. To learn more about Infor, please visit www.infor.com.

As experts in Infor CloudSuite Industrial (SyteLine) and Process for more than 30 years, LogicData has assisted manufacturers across the U.S. in achieving success. Through our ERP solution and comprehensive knowledge, we can position you to attain your goals.

LogicData, an Infor Gold Channel Partner, provides an extensive variety of onsite and remote services to aid organizations in their selection and implementation of these world class ERP solutions, CloudSuite Industrial and Process, tailoring your implementation to ensure your needs are met and leveraging the flexibility of this ERP's technology to personalize the application to your company. www.logicdata.com
